Subject: E-102 Sampling

Lou/Jim:

I did confirm with Todd that we have not yet sampled E-102. Todd indicated that it is hard to representative samples from the large diameter well during development procedures. Our plan is to collect samples during start-up for quick turn-around. As I indicated yesterday, we do not expect any significant variations in TCE concentrations that would cause us any operational problems at the GAC unit.

Todd sent you via e-mail the well abandonment specification for the old Goodyear Farms irrigation well. As I indicated, I have been delayed in following up with the property owner and expect to have that issue resolved by the end of September.

I am very interested in attending the next CAG meeting in November and I would appreciate learning the date as soon as it is available.

Goodyear's in-house council, Wally Ito, has approved the latest changes to the revised access agreement with Peacock. I expect that it will be sent to Peacock's attorney today (Friday). As I indicated to you, if this version is not acceptable to Peacock, Goodyear may consider asking the US EPA for assistance in getting access to the Peacock property for the next sampling event via legal means (i.e. a Warrant process).
